# Assembly

Assemble the three large centre pole sections together. These poles are quite heavy so two people are recommended here. Use the large hex key to tighten the poles.

1

Place the pole up the centre of the print, ensuring the top of the pole is in the reinforced section of the print.

2

Choose the desired location for your tent, place down the centre plate and hammer the pegs into the ground through the centre plate. Place the pole onto the centre plate and hold up.

3

Two additional people are now required to erect the tent. Two people should then pull the tent away from each other to create tension. Locate where each leg will be position and hammer a peg into the ground. Hook the leg over the peg to secure.
